Citizen Science Skilling for Library Staff, Researchers, and the Public

A practical guide designed to assist those organising and participating in a citizen science project to get the most out of the experience. The guide will enable you to have the skills to ensure a project is well set up from the start, is able to communicate to its stakeholders and citizens, manage its data and outputs, and overall ensure research benefits. The guide has been compiled by the LIBER Citizen Science Working Group and pulls on the generous contributions of the European and open science community.
